

Milestone 5

Monosic

Team members:

Max Macaluso mama9339@colorado.edu	Jiahao Wang jiwa8909@colorado.edu
Peter Martin pema6267@colorado.edu	Robert Sarno rosa0957@colorado.edu
Zongyi Huang zohu7459@colorado.edu	Keyu Wu kewu6458@colorado.edu

User Acceptance Tests:

Register	To test our registration feature, Monosic will create multiple accounts to ensure that email and passwords are entered correctly into our database. In addition, the system checks the email format and whether it is repeated.
Login	To test user logins, Monosic will attempt to log in to ensure that the system correctly recognizes the existing username and password combination and verifies its correctness. If the user does not enter the correct username and password, the web page will display "Username/Password is invalid"
Link Page	To test the link page after login, after the user successfully logs in to Monosic, check whether the web page jumps to the playlist. If the jump cannot be successful, the web page displays "Error 404".
Database	The database has been created, and we have tested if it could store all data for users information. However, we still need to do

	something to connect the frontend and database. Therefore we can have a register and login system for this app.
